# Konzept

- Einfaches Mieten und Vermieten von Schi / Snowboards
- Privatpersonen

```
// Prüfen, ob alle benötigten POST-Daten gesendet wurden
if (isset($_POST["id"]) && isset($_POST["value"])) {
    $allowedColumns = ["name", "email", "bio"]; // Erlaubte Spaltennamen
    $column = $_POST["id"];

    if (!in_array(needle: $column, haystack: $allowedColumns)) {
        $answer["message"] = "Ungültiges Feld";
        echo json_encode(value: $answer);
        exit;
    }

    $value = $_POST["value"];
    $email = $_SESSION["email"];

    $sql = "UPDATE user SET $column = ? WHERE email = ?";
    $stmt = $conn->prepare(query: $sql);

    if ($stmt) {
        $stmt->bind_param(types: "ss", var: &$value, vars: &$email);
        if ($stmt->execute()) {
            $answer["code"] = 200;
            $answer["success"] = true;
            $answer["message"] = "Update erfolgreich";
        } else {
            $answer["message"] = "Datenbank-Fehler: " . $stmt->error;
        }
    }
}
```

# Wiederholte Aufrufe verhindern

```
// Nur einmal pro X Minuten zählen (z.B. 30 Minuten)
$cookieName = "viewed_listing_" . $id;
$viewInterval = 30 * 60; // 30 Minuten in Sekunden

if (!isset($_COOKIE[$cookieName])) {
    $updateCounter = $conn->prepare(query: "UPDATE listings SET counter = counter + 1 WHERE id = ?");
    $updateCounter->bind_param(types: "i", var: &$id);
    $updateCounter->execute();
    $updateCounter->close();

    // Cookie setzen, damit innerhalb des Intervalls kein weiterer Zähler erhöht wird
    setcookie(name: $cookieName, value: "1", expires_or_options: time() + $viewInterval, path: "/");
}
```
